### **DESCRIPTION OF PACKAGING RULES**

Capers already selected by caliber, from 6/7 mm to 14 mm, are preliminarily subjected to a washing process before being processed.

For the packaging in glass jars the capers, after the preliminary washing, are sent to the continuous automatic line, which provides for the filling of the containers (capers - steering liquid), the closure with t.o. capsule, the labeling, the formation of the package which is then thermoregulated.

For packaging in food packaging (buckets - drums) all provided with the relevant certificates of conformity and suitability for contact with substances and food products, the capers already washed, are placed by the operator in the relevant containers, weighed so as to make them conform to the weight indicated, then added to the steering liquid, (vinegar), closed carefully, labeled according to current legislation and sent for shipment.

No preservatives and additives, etc., are added to the product and the capers supplied by us do not contain genetically modified organisms in any form and, moreover, as far as we know, we are not aware of studies and/or research aimed at carrying out genetic modification in capers.

Finally, the capers do not contain allergens and, moreover, not packaging other products cannot be contaminated in any way.

Our company operates in compliance with EU and national health and hygiene regulations and it complies with EC Reg. 852/2004 and D. Legislative Decree 193/2007

Storage must be in a cool, well-ventilated, and dry place.
